a365-toolkit

One administrator workflow across Entra, Defender, Purview and Sentinel.

PURPOSE

Discover what is missing, prepare a reviewable deployment plan, execute approved changes and establish which controls actually work.

CURRENT IMPLEMENTATION

SERVICE	CAPABILITY	DELIVERY
Entra	Create report-only high-risk agent CA; separately promote or disable the policy.	Approved changes
Defender	Read available hunting evidence; deploy the XDR-to-Sentinel connector.	Reads + deployment
Purview	Enable unified audit; create a scoped DLP policy and rule in simulation mode.	Approved changes
Sentinel	Workspace, connectors, 3 hunts, watchlist, 2 rules, workbook and incident-task automation.	Deploy + activate

DEPLOYMENT SEQUENCE

1 Select tenant and workload scope.
2 Assess prerequisites and existing settings.
3 Review and approve each exact plan.
4 Deploy, then verify data and behavior.
5 Approve activation; review drift afterward.

CURRENT BOUNDARIES

Development/test live targets only.
Defender Security for AI setup is separate.
DLP enforcement is not automated.
Response playbooks are human procedures; executable response runbooks are planned.

Service licenses, permissions and availability remain prerequisites.
Created resources and successful readback do not establish runtime protection.
